

There's no better choice for business communications

Businesses like yours finally have a choice. And they're choosing Socket to handle **ALL** their communication needs.

From local phone and long-distance to high-speed Internet and Wide Area Network (WAN) connectivity, Socket's full portfolio of communication services can be easily customized to streamline your network.

Your business will enjoy fast, reliable communications and the most responsive service you've ever known.

Bundled Solutions

Combine local phone, long-distance, Internet, and WAN connectivity using one money-saving T1 circuit. By grouping voice and data on a T1 circuit, your business can receive multiple services at a reduced cost. Our Bundled Solution offers the speed, efficiency and flexibility your business demands.

Local Telephone Service

Socket offers local telephone, competitive long distance, and a wide range of custom voice applications. For ten years, Socket has built a reliable and robust network on top of tomorrow's technology. This same network now serves as the foundation for our entire portfolio of telecommunication services. We offer a full array of features including DID, Caller ID, and Voice Mail. We can also provide you with new telephone numbers or port over existing numbers at your request.

Dedicated Internet

Plug into Socket's network for unmatched route diversity within the state of Missouri. Over the last decade, we have built a dependable and redundant network in order to ensure you the best and fastest access to the Internet. Socket offers everything from fractional T1 Internet Access up to OC-n levels.

Wide Area Networking

Businesses today are using Socket's reliable and robust frame relay service to securely link branch offices, establish intra-company video connections, and connect with their largest vendors. Our frame relay product is designed to accommodate emerging network requirements like Voice over IP (VoIP), and our Inverse Multiplexing for ATM (IMA) provides a scalable and cost-effective solution for supporting bandwidth-intensive applications.

Hosting, E-mail & Other Services

Socket provides additional Internet services for small to large businesses. State-of-the-art servers can handle your Web hosting and E-mail needs, and offer you spam filtering and firewall protection. Our engineers can also provide you with a dedicated server built to your specifications, or you can use your own equipment in one of our colocation spaces.

One Bill. One Contact. One Goal.

Exceeding your expectations will always be our goal. We do this by offering you a dedicated representative, a simplified and consolidated bill, and exceptional customer care.
